

Mounting example

"Zirkona Telescopic Arm"

Laptop mount in Volkswagen Passat (2010).

Zirkona Telescopic Arm can be combined with other components from the Joiner System and you will get a fantastic laptop mount for all kinds of vehicles: commercial vans, trucks, cars, etc. The possibility to adjust the mount in all directions, together with the possibility to change the working height, makes it easy and comfortable to use this product.

Two ball-joints and the outstanding telescopic functionality offer a maximum flexibility. When you don't use your laptop, you're able to adjust the mount to the vehicle-floor – the passengers don't lose any room.

This combination of Joiner-products can be mounted in the chair-rail of the passenger-seat. The Joiner-system offers you other possibilities too. With our tube-mount or universal-mount, workshops are able to mount this system into any kind of vehicle.
